The Catalog

This catalog provides a **detailed selection** of the capabilities of some members of the Torino Piemonte Aerospace project. For each company you will find a short profile and a **list of documents** presenting the wide range of solutions and competences it can offer you. The complete list of companies and their capabilities is available under "capability matrix".

The catalog is part of a wider spectrum of activities called "**PIA.NET Lab**" (Piemonte Aerospace Network Laboratory), a newly-born framework designed to propose innovative technologies (e.g. Unified Communication and Collaboration, intelligent part data management, product lifecycle management,…) and enhance cooperation among Torino Piemonte Aerospace SMEs to respond to buyers' needs.
